

Myeloid (mono/mac) T cells (naive/memory)

Keratinocytes (basal)

Myofibroblasts (?) Pericyte/SMC

Plasma cells

Myofibroblasts

Low-quality / ribosomal

Lymphatic endothelium

Mast cells

Fibroblasts

Endothelial

Keratinocytes (suprabasal)

DC1 / pDC mix

Figure 2 is a dot plot showing the fraction of cells in each group (y-axis) and the mean expression of genes in each group (x-axis). The y-axis lists 13 cell types: Endothelial, Fibroblasts, Keratinocytes (basal), Keratinocytes (suprabasal), Low-quality / ribosomal, Lymphatic endothelium, Mast cells, Myeloid (mono/mac), Myofibroblasts, Myofibroblasts (?), Pericyte/SMC, Plasma cells, T cells (naive/memory), and cDC1 / pDC mix. The x-axis lists 7 genes: COL1A1, COL1A2, DCN, LUM, TAGLN, ACTA2, and PDGFRA. The size of the dot represents the fraction of cells in the group, and the color represents the mean expression in the group. A legend on the right explains the dot size and color scales.

Fraction of cells in group (%)

10 20 30 40 50 60

Mean expression in group

0.0 0.5 1.0
